REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record fails to teach in combination as claimed a capacitance sensor having first and second capacitance elements connected in series in relation to a signal input to the capacitance element electrode, and displacement of the detective member can be detected on the basis of detection of a change in the capacitance value of the first capacitance element caused by a change in the interval between the conductive member and the capacitance element electrode. The sensor has two capacitance element electrodes in a pair, and after each of analog signals corresponding to signals respectively input to a circuit including one of the capacitance element electrodes and a circuit including the other of the capacitance element electrodes has passed the respective signal processing circuit having hysteretic characteristics and the analog signals are input to a logic element; an output signal is output from the logic element. As to claim 18, the sensor includes two capacitance element electrodes in a pair, and each of analog signals corresponding to signals respectively input to a circuit including one of the capacitance element electrodes and a circuit including the other of the capacitance element electrodes is input to a Schmitt trigger type logic element having Schmitt trigger input characteristics and an output signal is output from the Schmitt trigger type logic element.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
